Insitu Signs Agreement With University of Alaska Fairbanks for Joint Flight Operations

BINGEN, Wash., Aug. 7 /PRNewswire/ -- University of Alaska Fairbanks (UAF) and Insitu (Bingen, WA) have signed a Memorandum of Understanding (MOU) to work together on civilian flight operations demonstration and research. As part of the MOU, Insitu and UAF have established an operational system based upon Insitu's A-20 Unmanned Aerial Vehicle (UAV) at UAF's Poker Flat Research Range north of Fairbanks, Alaska. Insitu and UAF are planning flight demonstrations sometime this year. Together they will work cooperatively to display the usefulness of UAVs in Alaska airspace through multiple applications such as wild fire monitoring, mammal and animal tracking, and pipeline patrolling.

Both organizations strongly feel there is untapped potential for UAVs in civilian and commercial applications. UAF and operations at the Poker Flat Research Range provide an opportunity to test and experiment with the integration of unmanned technology into non-military applications. "Alaska is an ideal location for UAV operations due to the many civilian missions that can benefit from unmanned systems," states Greg Walker, manager of the Poker Flat Research Range. "Insitu's platform gives UAF the operational capability to meet civilian UAV requirements, and is also a good testbed as we consider approaches for airspace integration."

Insitu is involved with other projects in the commercial and civilian marketplace. Insitu developed and produces the GeoRanger UAV for Fugro Airborne Surveys, a corporation that collects and interprets geophysical data. Furthermore, Insitu recently partnered with Evergreen Aviation (McMinnville, OR) and participated in a flight demonstration for NASA and the US Forestry Service (USFS). This demo successfully exhibited the importance of UAVs assisting in fire-fighting and fire-monitoring situations.

About Insitu

Insitu, located in Bingen, Washington, develops Unmanned Aerial Systems (UAS) for commercial and military applications. Insitu, which introduced the first Unmanned Aerial Vehicle to cross the Atlantic Ocean, partnered with The Boeing Company to develop ScanEagle and Fugro Airborne Surveys to develop GeoRanger. For more information about the company, see www.insitu.com.
